                                                                                                                                                                                                                                               ⋧
                                                   The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell branacteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abloric stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office

Specifically, it refers to identifying genes that are up - or down-regulated in transgenic plants overexpressing the heterodimeric E2Fa/DPa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, enzymes, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or

              or physiology, altered endoredupilcation, biochemistry, signal transduction, storage lipid mobilisation and/or altered photosynthesis, each relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers during transformation of cells or tissues. The identified genes play a role in a variety of biological processes such as DNA replication, cell wall biosynthesis, nitrogen and/ or carbon metabolism or they function as transcription factors. This polynucleotide sequence is thale cress cDNA upregulated 1.3 fold or more in plants overexpressing the EZFA/DPA transcription factor, given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                883
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            943

The mutant polypeptide comprises at least 70 % sequence identity to the amino acid sequence of the DWF12 polypeptide given in the specification at positions 38-32 or 1-380, and having a mutation of at least one norconservative substitution, addition or deletion of an amino acid in a region of the polypeptide corresponding to a region given in the specification. The mutant DWF12 polypeptide is useful in producing transgenic plants that display at least one altered DWF12 phenotype, such as altered biochemistry, structure or morphology. The transgenic plant can be used in plant breeding or directly in agricultural production or 1004 AAGCTCACCCTTGGCACAAGGTTTTTCATAAACGGATGCCTCCAGAAGCAATAGACCTTG 1063 CATCTCGGCTTCTTCAATATTCACCAAGTCTACGCTGCACTGCGCTCGAAGCATGTGCTC 1123 ceccretericalerrealeagalerracides concarcine de contra d 901 961 DWARF12; DWF12; transgenic plant; plant breeding; industrial application; agricultural production; gene; ss. displaying altered biochemistry, structure or morphology which are useful in plant breeding, in agricultural production or industrial applications. industrial applications. The polynucleotide is useful in isolating or creating other mutant cell gene alleles, in inhibiting or enhancing endogenous DWF12 gene expression, and in standard diagnostic assays as hybridisation probe or primer. This polynucleotide sequence represents the cDNA of the wild-type DWF12 locus of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TTAAACTTTACATGTATCAGATCTTCCGGGACTTGCTTACATTCACATGTTGCTGGAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to protein kinases, especially calcium-dependent phosphorylase kinase (CDRX) and glycogen synthase kinase-3 (GSK-3). The polypeptides having GSK activity can be expressed by standard recombinant methodology. The polyucleotides encoding the polypeptides are useful fisolating cDNAs and genes encoding homologous proteins from the same or other plant species, for immunological screening of cDNA expression libraries, and for creating transgenic plants in which the glycogen synthase kinase polypeptides are present at higher or lower levels than normal or in cell types or developmental stages in which they are normally found. The polynucleotides are also useful as probes for genetically and physically mapping the genes that they are part of, and as markers for traits linked to those genes. The polypeptides are useful for attering the level of expression of GSK-3 in a transformed host cell. The present sequence represents a wheat GSK-3 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated polynucleotide encoding polypeptide having glycogen synthase kinase activity or its complement, useful for producing transgenic plants with altered levels of glycogen synthase kinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            98 AGCCTCATGCTCTTGCTCCGCCGCTGCAGCTTCACGACGCCGACGCCTTTGAAACGCCGTC 157

The present invention describes kinase polypeptides (I) such as a calcium dependent phosphorylase kinase polypeptide comprising a sequence of 101, 623, 157 or 111 (see ABP53632) amino acids, and a glycogen synthase kinase polypeptide comprising anino acids. and a glycogen comprising anino acids. (I) is something antibodies against the polypeptides, where the antibodies would be useful for immunological screening of CDNA expression libraries, and for preparing antibodies against the polypeptides, where the antibodies would be useful for detecting (I) in situ or in vitro, in cell extracts.

CC Nucleic acids (II) encoding (I) can be used to isolate CDNAs and genes encoding homologous proteins from the same or other plant species. (II) can a liso be used for creating transgenic plants in which (I) is present at higher or lower levels than normal or in cell types or in developmental stages in which they are not normally found. (II) are cuseful as probes or primers. The polynucleotides may be used as probes or primers. The polynucleotides may be used as probes or primers. The polynucleotides may be used as probes or primers. The polynucleotides may be used as probes or primers. The polynucleotides may be used as probes or brants for traits linked to those genes. The information can be used in plant breeding in order to develop lines with desired the prants of the used in plant breeding in order to develop.
                                                                                                                                                                                                                                                                                                synthase kinase; kinase; enzyme; plant; immunological screening;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New calcium-dependent phosphorylase kinase and glycogen synthase kinase polypeptides, for altering level of expression of kinase polypeptides in plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence encodes a glycogen synthase kinase from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1673 BP; 419 A; 421 C; 408 G; 424 T; 0 U; 1 Other;

The present sequence is a full-length cDNA encoding GmPK-1, a novel soybean protein kinase stress-related polypeptide (PKSRP). The cDNA was identified on the basis of homology to Physcomitrella patens PK-3 (see ACC57962) and PK-10 (see ACC57966) sequence. GmPK-1 is an example of PKSRPs of the invention that are important for modulating a plant's response to environmental stress. Over-expression of PKSRP coding nucleic acids in a plant results in the plant's increased tolerance to environmental stress. Transgenic monocot and dicot plants are provided that show increased tolerance to high salinity, drought and low
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            acid, useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      212

The present sequence is a full-length cDNA encoding BnPK-2, a novel canola protein kinase stress-related polypeptide (PKSRP). The CDNA was identified on the basis of homology to Physcomitzella patens PK-3 (see ACC57962) and PK-10 (see ACC57966) sequence. BnFK-2 is an example of PKSRPB of the invention that are important for modulating a plant's response to environmental stress. Over-expression of PKSRP coding nucleic acids in a plant results in the plant's increased tolerance to environmental stress. Transgenic monocot and dicot plants are provided that show increased tolerance to high salinity, drought and low

Sequence 1414, Application US/09016434

Patent No. 6500938

GENERAL INPORATION:
APPLICANT: Janice Au-Young

APPLICANT: Jeffrey J. Selhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
TITLE OF INVENTION: PATHWAY GENE EXPRESSION
NUMBER OF SEQUENCES: 1490

CORRESPONDENCE ADDRESS: ADDRESSES: ADDR

US-09-216-958-1
; Sequence 1, Application US/09216958
; Patent No. 6248559
; GENERAL INFORMATION:
; APPLICANT: Akihiko TAKASHIMA et al.
; TITLE OF INVENTION: SCREENING METHOD FOR THERAPEUTIC AGENTS AGAINST
; TITLE OF INVENTION: ALZHEIMER'S DISEASE (AS AMENDED)
; NUMBER OF SEQUENCES: 13
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: WENDEROTH, LIND & PONACK

STREET: 805 Fifteenth Street, N.W., #700
